

Save Model (Important step)

Model: "sequential_1"

Layer (type)	Output Shape	Param #
conv2d (Conv2D)	(None, 26, 26, 32)	320
max_pooling2d (MaxPooling2D)	(None, 13, 13, 32)	0
flatten (Flatten)	(None, 5408)	0
dense_3 (Dense)	(None, 128)	692,352
dense_4 (Dense)	(None, 10)	1,290

Total params: 2,081,888 (7.94 MB)
 Trainable params: 693,962 (2.65 MB)
 Non-trainable params: 0 (0.00 B)
 Optimizer params: 1,387,926 (5.29 MB)

kernel size = (3,3)

Number

$$\frac{7}{1} = 32$$

filters

input shape = 28x28x1

$$32 * (\text{filter height} * \text{filter width} * \text{input channel} + \text{Bias})$$

$$32 * (3 * 3 * 1 + 1) = 320$$

$$\frac{n - f + 2p}{s} + 1$$

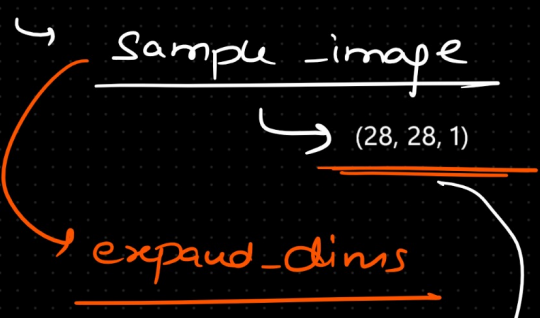

$$\frac{28 - 3}{1} + 1 = 26$$

output shape

None \rightarrow Batch size

Test set

input_image $\rightarrow (1, 28, 28, 1)$

$10,000$ \rightarrow total count of test images
 input shape \rightarrow Grayscale (Num of Channels)
 $x_test = x_test.reshape(-1, 28, 28, 1) / 255.0$
 In this step, we add 4 dimensions. Then how does it convert to 3D automatically?

AlexNet α CNN Architecture

$227 \times 227 \times 3$

Step 1 (CNN)

$$I = 227 \times 227 \times 3$$

$$K = 11 \times 11 \text{ (count = 96)}$$

$$\text{Stride} = 4$$

$$\text{output shape} \Rightarrow 227 - 11 + 2 \times 0 + 1$$

$$\Rightarrow \frac{216}{4} + 1$$

$$\Rightarrow 54 + 1 = 55$$

num of filters

Step 2

Neural Networks

$$\Rightarrow \frac{55 - 3}{2} + 1$$

$$\Rightarrow \frac{52}{2} + 1$$

$$\Rightarrow \underline{\underline{27}}$$

input shape = 27×27

Kernel = 5×5

$$\frac{27 - 5 + 2 \times 2}{1} + 1$$

$$\underline{\underline{27}}$$

Padding = "same"

$$\left\{ \begin{array}{l} \text{input} \\ \text{image} \end{array} \right\} = \frac{\text{output}}{\text{image}}$$
